COMPLIANCE IN A BOX

One enclosure, one vendor, one solution. Ultimately secure, unequivocally compliant.

// BLUEGRID
PRODUCT DATA SHEET

PACKAGED COMPLIANCE MAXIMUM SECURITY

Cohesive Components Designed to operate in a single enclosure.

Compliance with government regulations, industry oversight bodies and corporate security policies is often a complex endeavour. Businesses grapple with delivering applications and optimizing IT infrastructure to address their most essential needs, let alone the expense of compliance certification and maintenance.

In the meantime, data security incidents are growing at an average rate of 65% a year. Continuous advanced persistent threats are being orchestrated.

What is the most cost-effective way of meeting regulatory compliance, while ensuring the greatest protection against security attacks? The answer is quite simple: **bluezone** engineered security systems. A state-of-the-art integrated server enclosure, **bluegrid** is a cohesive set of components that work in concert to deliver one critical solution: compliance. It is a complete, safe, self-contained

ecosystem of multiple architectural tiers that address all aspects of information security. Each tier is deployed on a redundant pair of **bluenode** devices and can be extended to scale when facing high transaction volumes.

Cross-site high availability is not a concern: the grids are engineered to support geo-redundancy in active-active or active-standby mode, addressing advanced service virtualization and disaster recovery objectives.

Both single and multi-grid options deliver an end-to-end compliance environment that exceeds the requirements of PCI, FedRAMP, OSFI, HIPAA and other regulatory standards.

Your most critical digital assets are fully secure.

DELIVERING
COMPLIANCE?
**ENCLOSE IT
IN THE GRID.**

Point of Delivery
**Running in our secure hybrid cloud
or your private data center.**

Each **bluegrid** includes a set of integrated and pre-configured computing resources working as an atomic, supercharged security engine that is independent of the outside world.

Power, space and fiber transport are the only requirements for running the grid. It is a turnkey solution which can be deployed in our secure

hybrid cloud that interconnects 33 markets across five continents, or delivered to your own data center, ready to wear.

Critical compliance and security features, such as content shaping, encryption, tokenization and key management, are operational independent of the **bluegrid** service location.

85%

Average cost savings on compliance delivery and audit. Security included.
