SERVICE DATA SHEET

HOSTED COMPLIANCE MANAGED SECURITY

Hosted Service

Next-generation standard for cloud security.

Cloud computing has evolved as a model for enabling ubiquitous, on-demand access to a shared pool of system resources, including networks, servers, storage arrays and application services. The notion of *where* cloud services are deployed is often confused with *how* they are delivered: onsite/hosted facility vs. public/private access.

The onsite or off-premise location of a business-critical digital asset largely affects the information security and risk posture of an organization. It is often unclear who is responsible for information security, governance, and compliance with policies and standards. Meanwhile, one of the top 3 emerging technologies that IT professionals are pressured to deploy is cloud services, which they also feel pose the greatest information security risk.

New derivatives of cloud deployment models that are emerging, such as virtual private cloud, diminish the value

of cloud perimeter defense and prompt new, cloud-aware security solutions. The answer is quite simple: a **bluezone** cloud service, which enables unprecedented levels of information protection. All sensitive data is protected at the closest location to the point-of-capture, where it is de-identified and masked. The data remains in this state while in transit, during processing and at rest, without losing its usability for any particular business purpose.

Our hybrid cloud design is based on a *data-centric* security architecture, mitigating malicious access and supporting the most stringent carrier-grade requirements, including active-active availability across geographical boundaries.

Protect your e-commerce transactions with bluezone.

WHERE IS
COMPLIANCE?
MOVING TO
THE ZONE.

Point of Presence

Combining cloud compliance with business agility and efficiency.

The privacy and confidentiality requirements for personal information defined by various compliance specifications demand a diverse collection of expertise from multiple security domains and the associated business units. A **bluezone** instance running in one of our secure, carrier-grade data centers delivers an uncompromising value to your organization.

Our hosted model is a turnkey security solution available in 14 countries across five continents, supporting the agility of your business.

Leading the innovation frontier of the regulatory solutions industry, **bluezone** is an integrated compliance cloud that mitigates the dynamics of a constantly evolving cyber threat landscape.
